

Certified Information Systems Security Professional (CISSP) training course

If you're building a career in information security then Certified Information Systems Security Professional (CISSP) is the must-have qualification to help you progress. It is a globally recognized standard (ISO/IEC 17024) that demonstrates your competence as an IT professional. Covering topics including cloud computing, mobile security, application development security, and risk management, you will gain the knowledge to best manage information security issues back in your organization.

This 5 day course is led by the globally recognized instructors. With their expert knowledge, our high quality content and access to the most relevant tools, our intensive course will make sure you're prepared for your CISSP exam. Plus you'll be able to leverage this knowledge and experience in your organization, helping to stay ahead of the most critical security topics and build resilience.

This course will prepare you with the knowledge and skills to complete the CISSP exam, which will get you Certified Information Systems Security Professional status.

Who should attend?

This training course is intended for professionals who have at least 5 years of recent full-time professional work experience in 2 or more of the 8 domains of the CISSP common body of knowledge (CBK), such as:

- Security consultants
- Security managers
- IT directors/managers
- Security auditors
- Security architects
- Security analysts
- Security systems engineers
- Chief information security officers
- Security directors
- Network architects

Please note: A one year experience waiver is available with a 4-year college degree, or regional equivalent, or additional credentials from the (ISC)² approved list, thus requiring four years of direct full-time professional security work experience in 2 or more of the 8 domains of the CISSP CBK.

What will I learn?

This training provides an extensive review of information security concepts and industry best practices, covering the 8 domains of the CISSP Common Body of Knowledge (CBK):

- Security and risk management
- Asset security
- Security engineering
- Communications and network security
- Identity and access management
- Security assessment and testing
- Security operations
- Software development security

How will I benefit?

- You'll increase your expertise as leading information security systems professional, as defined by globally recognized CISSP certification
- You'll develop the expertise to manage a best-practice information security system, aligned to globally accepted standards, that ensures your organization's information assets are protected
- Be confident with emerging threats, technologies, regulations, standards, and industry best practices, and how to stay informed
- Be familiar with industry accepted terminology and practices used by information security professionals
