

## **M20466 Implementing Data Models and Reports with Microsoft SQL Server.**

**Duration 5 Days**

### **Overview**

The focus of this five-day instructor-led course is on creating managed enterprise BI solutions. It describes how to implement multidimensional and tabular data models, deliver reports with Microsoft SQL Server Reporting Services, create dashboards with Microsoft SharePoint Server PerformancePoint Services, and discover business insights by using data mining.

### **Target Audience**

This course is intended for database professionals who need to fulfill a Business Intelligence Developer role to create analysis and reporting solutions. Primary responsibilities include:

- Implementing analytical data models, such as OLAP cubes.
- Implementing reports, and managing report delivery.
- Creating business performance dashboards.
- Supporting data mining and predictive analysis.

### **Module 1: Introduction to Business Intelligence and Data Modeling**

As a SQL Server database professional, you may be required to participate in, or perhaps even lead, a project with the aim of implementing an effective enterprise BI solution. Therefore, it is important that you have a good understanding of the various elements that comprise a BI solution, the business and IT personnel typically involved in a BI project, and the Microsoft products that you can use to implement the solution.

#### **Lessons**

- Elements of an Enterprise BI Solution
- The Microsoft Enterprise BI Platform
- Planning an Enterprise BI Project

#### **Lab : Exploring a BI Solution**

- Exploring the Data Warehouse
- Exploring the Analysis Services Data Model
- Exploring Reports

### **Module 2: Creating Multidimensional Databases**

This module provides an introduction to multidimensional databases and introduces the core components of an Online Analytical Processing (OLAP) cube.

## Lessons

- Introduction to Multidimensional Analysis
- Creating Data Sources and Data Source Views
- Creating a Cube
- Overview of Cube Security

### Lab : Creating a Multidimensional Database

- Creating a Data Source
- Creating and Modifying a Data Source View
- Creating and Modifying a Cube
- Adding a Dimension

## Module 3: Working with Cubes and Dimensions

This module describes how to create and configure dimensions and dimension hierarchies in an Analysis Services multidimensional data model.

## Lessons

- Configuring Dimensions
- Defining Attribute Hierarchies
- Sorting and Grouping Hierarchies

### Lab : Defining Dimensions

- Configuring Dimensions and Attributes
- Creating Hierarchies
- Creating a Hierarchy with Attribute Relationships
- Creating a Ragged Hierarchy
- Browsing Dimensions and Hierarchies in a Cube

## Module 4: Working with Measures and Measure Groups

This module describes measures and measure groups. It also explains how you can use them to define fact tables and associate dimensions with measures.

## Lessons

- Working with Measures
- Working with Measure Groups

### Lab : Configuring Measures and Measure Groups

- Configuring Measures
- Defining a Regular Relationship
- Configuring Measure Group Storage

## **Module 5: Introduction to MDX**

This module describes the fundamentals of MDX and explains how to build calculations, such as calculated members and named sets.

### **Lessons**

- MDX Fundamentals
- Adding Calculations to a Cube
- Using MDX to Query a Cube

### **Lab : Using MDX**

- Creating Calculated Members
- Querying a Cube by Using MDX

## **Module 6: Enhancing a Cube**

This module describes how to enhance a cube with Key Performance Indicators (KPIs), actions, perspectives, and translations.

### **Lessons**

- Working with Key Performance Indicators
- Working with Actions
- Working with Perspectives
- Working with Translations

### **Lab : Customizing a Cube**

- Implementing an Action
- Implementing Perspectives
- Implementing a Translation

## **Module 7: Implementing an Analysis Services Tabular Data Model**

This module describes Analysis Services tabular data models and explains how to develop a tabular data model using the SQL Server Data Tools for Business Intelligence (BI) add-in for Visual Studio.

### **Lessons**

- Introduction to Analysis Services Tabular Data Models
- Creating a Tabular Data Model
- Using an Analysis Services Tabular Data Model in the Enterprise

### **Lab : Implementing an Analysis Services Tabular Data Model**

- Creating an Analysis Services Tabular Data Model Project
- Configuring Columns and Relationships
- Deploying an Analysis Services Tabular Data Model

## **Module 8: Introduction to DAX**

This module explains the fundamentals of the DAX language. It also explains how you can use DAX to create calculated columns and measures, and how you can use them in your tabular data models.

### **Lessons**

- DAX Fundamentals
- Enhancing a Tabular Data Model with DAX

### **Lab : Using DAX to Enhance a Tabular Data Model**

- Creating Calculated Columns
- Creating Measures
- Creating a KPI
- Implementing a Parent-Child Hierarchy

## **Module 9: Implementing Reports with SQL Server Reporting Services**

This module introduces Microsoft SQL Server Reporting Services and discusses the tools and techniques that a professional BI developer can use to create and publish reports.

### **Lessons**

- Introduction to Reporting Services
- Creating a Report with Report Designer
- Grouping and Aggregating Data in a Report
- Publishing and Viewing a Report

### **Lab : Creating a Report with Report Designer**

- Creating a Report
- Grouping and Aggregating Data
- Publishing a Report

## **Module 10: Enhancing Reports with SQL Server Reporting Services**

This module describes how to enhance a SQL Server reporting Services report with charts and other visualizations, and how to use parameters to filter data in a report.

### **Lessons**

- Showing Data Graphically
- Filtering Reports by Using Parameters

### **Lab : Enhancing a Report**

- Adding a Chart to a Report
- Adding Parameters to a Report
- Using Data Bars and Sparklines
- Using a Map

## **Module 11: Managing Report Execution and Delivery**

This module describes how to apply security and report execution settings, and how to create subscriptions to deliver reports.

### **Lessons**

- Managing Report Security
- Managing Report Execution
- Subscriptions and Data Alerts
- Troubleshooting Reporting Services

### **Lab : Configuring Report Execution and Delivery**

- Configuring Report Execution
- Implementing a Standard Subscription
- Implementing a Data-Driven Subscription

## **Module 12: Delivering BI with SharePoint PerformancePoint Services**

This module introduces Microsoft SharePoint Server as a platform for BI, and then focuses on building BI dashboards and scorecards with PerformancePoint Services.

### **Lessons**

- Introduction to SharePoint Server as a BI Platform
- Introduction to PerformancePoint Services
- PerformancePoint Data Sources and Time Intelligence
- Reports, Scorecards, and Dashboards

### **Lab : Implementing a SharePoint Server BI Solution**

- Creating a SharePoint Server Site for BI
- Configuring PerformancePoint Data Access
- Creating PerformancePoint Reports
- Creating a PerformancePoint Scorecard
- Creating a PerformancePoint Dashboard

## **Module 13: Performing Predictive Analysis with Data Mining**

This module introduces data mining, describes how to create a data mining solution, how to validate data mining models, how to use the Data Mining Add-ins for Microsoft Excel, and how to incorporate data mining results into Reporting Services reports.

### **Lessons**

- Overview of Data Mining
- Creating a Data Mining Solution
- Validating a Data Mining Model
- Consuming Data Mining Data

## **Lab : Using Data Mining to Support a Marketing Campaign**

- Using Table Analysis Tools
- Creating a Data Mining Structure
- Adding a Data Mining Model to a Data Mining Structure
- Validating a Data Mining Model
- Using a Data Mining Model in a Report
